– In the folder "Slides" you can find the source file "SlidesSpatialStatistics.Rmd" (R Markdown) with the comments to the slides.

Note: in order to compile the file is necessary to change the working directory on line 448 using the path where the data files are stored.

The output file containing the slides is "SlidesSpatialStatistics.pdf" (note however that the pdf does not include the comments). The other files are images and auxiliary files.

– In the folder "Data and R code" you can find the data used for the case study, the shapefile and an R code with all the R instructions (with additional analysis not reported in the slides).

– In the folder "Quiz" you can find multiple choice quizzes and R exercices for students' assessment
